

Abhishek Kossireddi

Senior Full Stack Java Developer | Cloud & Platform Engineer

Email: kvsabhishek.08@gmail.com | Phone: 404-884-9424

PROFESSIONAL SUMMARY

Senior Full Stack Java Developer with 11+ years of experience designing, building, and modernizing enterprise applications across finance, telecom, retail, logistics, and payments. Strong background in Java, Spring Boot, microservices, distributed systems, cloud-native architecture, and full-stack web development. Experienced in leading onshore/offshore teams, translating business needs into scalable technical designs, and improving reliability, security, performance, and developer productivity across complex production environments.

CORE COMPETENCIES

Backend Engineering: Java, J2EE, Spring Boot, Spring MVC, Hibernate, REST, SOAP, WSDL, JMS, JDBC, Servlets, JSP	Frontend Engineering: React, Next.js, AngularJS, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery, Tailwind CSS
Cloud & Infrastructure: AWS, GCP, Kubernetes, GKE, EKS, Docker, Podman, Terraform, Cloud Run, Cloud Functions, Lambda	Data & Messaging: Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, HBase, Hive, Kafka, Pulsar, Spark, Storm, Redis
DevOps & Observability: Maven, Ant, Jenkins, GitHub, SVN, CAPE CI/CD, Prometheus, Grafana, Splunk, Honeycomb, CloudWatch	Security & Architecture: OAuth 2.0, SAML, OIDC, IAM, HashiCorp Vault, CyberArk, SFTP, API Gateway, APIGEE, design patterns
Leadership: Agile delivery, sprint planning, HLD/LLD documentation, code reviews, offshore coordination, stakeholder management	

PROFESSIONAL EXPERIENCE

Equifax - Employment Data Analysis

Senior Software Engineer | March 2026 - Present

- Lead Agile planning and delivery for enterprise employment-data initiatives, partnering with Product Owners, QA, Systems Engineers, and cross-functional stakeholders.
- Author HLD/LLD documentation, class diagrams, sequence diagrams, and business specification requirements for extensible external-client integrations.
- Modernized application security by implementing data encryption, secure SFTP workflows, and a migration from CyberArk to HashiCorp Vault.
- Built and enhanced SOAP web services and WSDL contracts supporting multi-client requests, dynamic data-source keying, and resilient error handling.
- Developed Oracle stored procedures and integrated Hibernate/Spring persistence workflows for business-critical order capture and DB-level logging.
- Automated large-scale batch processing and data transfers with GCP Airflow/Dataflow plugins, UNIX shell scripting, Maven, Ant, and CAPE CI/CD pipelines.
- Developed XSL and JasperReports solutions to generate secure, localized XML and PDF business reports.

Verizon - Fixed Wireless Access

Full Stack Engineer / Infrastructure Architect | Jan 2025 - Mar 2026

- Led a global engineering team of 9 across onshore and offshore groups, serving as primary technical point of contact for stakeholders and delivery teams.
- Owned end-to-end SDLC for a technician-facing 5G installation and activation suite, from requirements through production deployment and field support.
- Architected full-stack applications using Java, Node.js, React/Angular, and microservices to support real-time residential 5G router provisioning.
- Designed backend provisioning workflows that synchronized hardware activation data with central telecom platforms and reduced field diagnostic latency.
- Implemented federated Prometheus monitoring across multi-region data centers to provide centralized health visibility while preserving localized operational ownership.
- Engineered custom Linux exporters and service-discovery mechanisms, reducing manual microservice monitoring onboarding by 80%.

- Built Redis-backed capabilities including real-time leaderboards, profile caching, and high-throughput rate limiting with atomic counters and sliding-log patterns.
- Designed GCP architectures incorporating high availability, disaster recovery, hybrid connectivity, BigQuery, Dataflow, Pub/Sub, Dataproc, IAP, Cloud Armor, and Confidential Computing.
- Improved observability with Honeycomb high-cardinality tracing, Splunk centralized logging, and CloudWatch composite alarms integrated with SNS/PagerDuty.
- Deployed secure Podman-based container solutions to maintain consistent development and production-like environments.

Verizon - Network Performance Intelligence | Alpharetta, GA

Senior Full Stack Engineer | Aug 2023 - Dec 2024

- Architected and automated GCP infrastructure using Terraform, Google Kubernetes Engine, Cloud Storage, Cloud SQL, Cloud Functions, VPCs, subnets, firewalls, and autoscaling policies.
- Migrated legacy on-premise workloads to GCP, improving availability to 99.9% and reducing infrastructure costs by 25-40%.
- Built Spring Boot microservices for high-volume batch processing, traffic monitoring, and field-network intelligence workflows.
- Developed Apache Spark batch and streaming jobs to compute baseline metrics, process real-time verification requests, and load curated datasets into HBase.
- Designed Kafka, Pulsar, and Storm processing pipelines for circuit and interface performance data across high-throughput distributed systems.
- Built Python services and automation frameworks using FastAPI, Flask, Boto3, PySpark, Avro, and Kafka Connect to support provisioning, CDC, and data-platform operations.
- Managed GCP clusters, private data-security protocols, APIGEE proxy layers with API-key authentication, and cloud-to-message-bus integration.
- Implemented Grafana dashboards, Loki, Tempo, SLIs, and SLOs to connect application metrics, logs, traces, and stakeholder business KPIs.
- Migrated on-premise SQL workloads to Amazon Aurora and built AWS Glue ETL pipelines into S3 data lakes using Glue Catalog and Crawlers.
- Reduced cloud operating costs through Aurora rightsizing, partitioning strategies, committed-use discounts, and resource-utilization analysis.

TSYS & Global Payments | Alpharetta, GA

Sr. Java Developer / Web Developer | Feb 2022 - July 2023

- Developed and maintained CI/CD pipelines for AWS-hosted enterprise applications using Terraform, Bash, GitHub, and environment automation.
- Designed microservice security using Spring Boot, Spring Security SAML, vulnerability-management practices, and highly available AWS operations.
- Integrated Spring and Hibernate persistence layers and consumed RESTful services through Spring REST clients.
- Led development of a React, TypeScript, and Tailwind CSS design system adopted by 12+ internal teams, reducing UI delivery effort by 50%.
- Engineered state-management architecture with Zustand and React Query, eliminating redundant API calls and resolving race conditions in real-time dashboards.
- Implemented micro-frontend architecture with Module Federation to allow independent deployment of product modules within a unified React ecosystem.
- Built SSO capabilities using SAML 2.0, OIDC, MFA, adaptive authentication, and centralized identity tools such as Keycloak, Cognito, Okta, Auth0, and Azure AD.
- Supported Google Cloud modernization patterns including GKE, Compute Engine, Cloud SQL, Pub/Sub, Eventarc, Cloud CDN, Cloud Armor, IAM, and Shared VPCs.

FedEx | Pittsburgh, PA

Sr. Java Developer | Oct 2020 - Feb 2022

- Led offshore delivery for two mainstream enterprise applications and coordinated design, development, code review, testing, and release activities.
- Developed and published Spring Boot REST APIs and refactored core microservices to improve maintainability and reduce code complexity.
- Implemented Docker and Nginx-based deployment patterns to support continuous delivery in high-scalability environments.
- Designed MongoDB schemas, complex JSON data models, and optimized SQL stored procedures and queries for better runtime performance.
- Built Kafka producers and consumers with retry/error-handling patterns to improve data consistency across distributed environments.
- Designed Redis caching strategies that reduced database load and delivered sub-100ms responses for frequently accessed regional data.
- Deployed new applications into GCP and supported OAuth 2.0 integrations with PKCE, least-privilege scopes, secure token refresh, and third-party SaaS synchronization.

- Built reusable AngularJS and jQuery UI components and upgraded legacy AngularJS applications to improve frontend stability.

Tractor Supply Company | Nashville, TN

Sr. Java Developer / Web Developer | Feb 2019 - Aug 2020

- Designed n-tier enterprise applications using Core Java, Spring Boot, Spring ORM, UML, and established J2EE design patterns.
- Built REST and SOAP integrations with API versioning, JSON structures, JMS-based asynchronous workflows, and C++ service clients.
- Managed AWS-hosted web applications, S3 bucket structures, CloudTrail logs, Apache servers, Jenkins builds, and QA/DEV/Production release support.
- Developed AngularJS applications with two-way binding, DOJO widgets, AJAX support, and standardized UI directory structures.
- Migrated Java modules to Kotlin for Android development and developed multithreaded C++/STL processes for real-time event notifications.
- Architected Next.js and React solutions using App Router, Server-Side Rendering, Incremental Static Regeneration, React Server Components, Apollo Client, and custom hooks.
- Improved web performance through edge rendering, optimized data fetching, reduced client-side JavaScript, and reusable design-system patterns.
- Implemented Karma unit testing and resolved build issues across development, QA, and production environments.

Walmart | Bentonville, AR

Software Developer III | Mar 2015 - Sep 2017

- Developed JEE web services using SOAP, WSDL, UDDI, Spring MVC, Hibernate DAO classes, and Spring IOC integration.
- Built TIBCO BusinessWorks interfaces in fault-tolerant and load-balanced modes and configured TIBCO Administrator, TIBCO Hawk, and adapters for SAP, PeopleSoft, and Siebel.
- Created XSD schemas and transformation processes for XML and proprietary data exchange across distributed business workflows.
- Developed AngularJS, Backbone, RequireJS, JSP custom tags, JavaScript, Ruby, and Python utilities for web applications and operational automation.
- Supported MongoDB administration, data modeling, JavaScript DML operations, imports, exports, ad-hoc backups, and health monitoring.
- Automated builds using Ant and managed source control with SVN in enterprise release environments.

EDUCATION

Master of Science in Computer Science | GPA: 3.8/4.0 | 2018 - 2019

Southern University and A&M College, USA

Bachelor of Technology | GPA: 3.6/4.0 | 2010 - 2014

Manav Bharti University, India
