

Abhishek Kossireddi

Senior Full Stack Java Developer | Cloud & Platform Engineer

Email: kvsabhishek.08@gmail.com | Phone: 404-884-9424

PROFESSIONAL SUMMARY

Senior Full Stack Java Developer and Cloud/Platform Engineer with 11+ years of experience designing, building, modernizing, and supporting enterprise applications across telecom, finance, payments, logistics, retail, and employment-data domains. Deep hands-on background in Java, J2EE, Spring Boot, microservices, REST/SOAP services, distributed data pipelines, full-stack web platforms, observability, cloud migration, and DevOps automation. Proven ability to lead onshore/offshore teams, produce HLD/LLD artifacts, translate business requirements into scalable architecture, and improve reliability, security, performance, and developer productivity across complex production environments.

CORE COMPETENCIES

Backend Engineering: Java, J2EE, Core Java, Spring Boot, Spring MVC, Hibernate, REST, SOAP, WSDL, JMS, JDBC, Servlets, JSP, EJB, design patterns	Frontend Engineering: React, Next.js, AngularJS, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery, Tailwind CSS, Module Federation, Apollo Client
Cloud & Infrastructure: AWS, GCP, Kubernetes, GKE, EKS, Docker, Podman, Terraform, Cloud Run, Cloud Functions, Lambda, Compute Engine, Cloud SQL	Data & Messaging: Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, HBase, Hive, Kafka, Pulsar, Spark, Storm, Redis, AWS Glue, Amazon Aurora
DevOps & Observability: Maven, Ant, Jenkins, GitHub, SVN, CAPE CI/CD, Prometheus, Grafana, Loki, Tempo, Splunk, Honeycomb, CloudWatch, DataDog	Security & Integration: OAuth 2.0, SAML, OIDC, IAM, HashiCorp Vault, CyberArk, SFTP, APIGEE, API Gateway, Cloud Armor, IAP, SSO, MFA
Leadership & Delivery: Agile/Scrum, sprint planning, estimation, HLD/LLD documentation, code reviews, mentoring, offshore coordination, stakeholder management	

SELECTED PROFESSIONAL HIGHLIGHTS

- Led global delivery teams of up to 9 engineers across onshore and offshore locations while owning technical direction, sprint planning, code quality, and stakeholder communication.
- Delivered cloud-native and hybrid architectures across AWS and GCP, including GKE, EKS, Terraform, Cloud Run, Cloud Functions, Lambda, Aurora, Glue, Pub/Sub, BigQuery, and Dataflow.
- Built high-throughput distributed systems using Spring Boot, Kafka, Pulsar, Spark, Redis, FastAPI, PySpark, HBase, Hive, and microservice patterns.
- Improved production visibility through Prometheus, Grafana, Honeycomb, Splunk, CloudWatch, Loki, Tempo, custom exporters, SLIs, SLOs, and business-level dashboards.
- Modernized security controls using OAuth 2.0, SAML/OIDC, PKCE, IAM, Vault, CyberArk, secure SFTP, encryption, MFA, API gateways, and centralized identity platforms.
- Reduced operational cost and risk through cloud migration, infrastructure automation, rightsizing, partitioning strategies, CI/CD standardization, and repeatable deployment playbooks.

PROFESSIONAL EXPERIENCE

Equifax - Employment Data Analysis

Senior Software Engineer | March 2026 - Present

- Lead Agile planning and delivery for enterprise employment-data initiatives, partnering with Product Owners, QA, Systems Engineers, and business stakeholders to manage complex change requests.
- Estimate business requirements, define technical scope, and coordinate end-to-end implementation across design, development, integration testing, release packaging, and post-release support.
- Author HLD/LLD documentation, class diagrams, sequence diagrams, Business Specification Requirements, and integration design artifacts for extensible external-client solutions.
- Modernized application security by implementing data encryption, secure SFTP workflows, and a critical migration from CyberArk to HashiCorp Vault.
- Configured and validated WebSphere JDBC connectivity and secure credential handling as part of the enterprise secrets-management modernization.

- Built and enhanced SOAP web services and WSDL contracts supporting multi-client requests, dynamic data-source keying, and resilient error-handling scenarios.
- Developed Java-based business logic, Oracle stored procedures, and Hibernate/Spring persistence workflows for business-critical order capture and DB-level logging.
- Automated large-scale batch processing and data transfers using GCP Airflow/Dataflow plugins, UNIX shell scripting, Maven, Ant, and CAPE CI/CD pipelines.
- Developed XSL and JasperReports solutions to generate secure, localized XML and PDF business reports for downstream business operations.
- Enforced organizational coding standards, performed repository management across SVN/GitHub, and supported build/deployment packaging for enterprise releases.

Verizon - Fixed Wireless Access

Full Stack Engineer / Infrastructure Architect | Jan 2025 - Mar 2026

- Led a global engineering team of 9 across onshore and offshore groups, serving as the primary technical point of contact between stakeholders, architects, product teams, and delivery teams.
- Directed sprint planning, resource allocation, estimation, code reviews, and technical mentoring to deliver complex 5G installation modules on schedule.
- Owned end-to-end SDLC for a technician-facing 5G installation and activation suite, from requirements gathering through production deployment and field support.
- Architected full-stack applications using Java, Node.js, React/Angular, and microservices to support real-time residential 5G router provisioning and activation.
- Designed backend provisioning workflows that synchronized hardware activation data with central telecom platforms and reduced field diagnostic latency.
- Integrated complex backend logic for 5G hardware provisioning, installation eligibility, technician workflows, and instantaneous data synchronization with telecom databases.
- Implemented federated Prometheus monitoring across multi-region data centers to create a centralized health view while preserving localized operational ownership.
- Engineered custom Linux exporters and service-discovery mechanisms, reducing manual microservice monitoring onboarding by 80%.
- Improved observability with Honeycomb high-cardinality tracing, Splunk centralized logging, CloudWatch dashboards, composite alarms, and SNS/PagerDuty integrations.
- Used Splunk indexer clusters, heavy forwarders, and optimized search patterns to support hybrid-cloud log ingestion and faster incident analysis.
- Built Redis-backed capabilities including real-time leaderboards, profile caching, and high-throughput rate limiting with atomic counters, sorted sets, hashes, fixed-window, and sliding-log patterns.
- Designed GCP architectures incorporating high availability, disaster recovery, hybrid connectivity, BigQuery, Dataflow, Pub/Sub, Dataproc, IAP, Cloud Armor, Binary Authorization, and Confidential Computing.
- Guided cloud migration assessments for legacy systems, including lift-and-shift, re-platforming, and refactoring toward cloud-native service boundaries.
- Deployed secure Podman-based container solutions and Podman pods to maintain consistent development and production-like environments.
- Automated infrastructure provisioning across hardware/software stacks to support high-availability applications for field technicians.

Verizon - Network Performance Intelligence | Alpharetta, GA

Senior Full Stack Engineer | Aug 2023 - Dec 2024

- Architected and automated GCP infrastructure using Terraform, GKE, Cloud Storage, Cloud SQL, Cloud Functions, VPCs, subnets, firewalls, deployment automation, and autoscaling policies.
- Migrated legacy on-premise workloads to GCP, improving availability to 99.9% and reducing infrastructure costs by 25-40%.
- Designed secure cloud landing-zone patterns using IAM roles/policies, VPC Service Controls, Security Command Center, encryption practices, and Cloud Operations.
- Built Spring Boot microservices for high-volume batch processing, traffic monitoring, real-time verification, and field-network intelligence workflows.
- Developed Apache Spark batch jobs to compute baseline metric trends and load curated datasets into HBase for downstream analytics.
- Engineered Spark streaming jobs and Storm topologies to process real-time circuit, interface, and performance data across distributed systems.
- Designed Kafka, Pulsar, and event-driven pipelines for high-throughput network telemetry, message transformation, and integration with Verizon message-bus formats.

- Built Python services and automation frameworks with FastAPI, Flask, Boto3, PySpark, Avro, and Kafka Connect to support provisioning, CDC, and data-platform operations.
- Implemented Debezium and Kafka Connect patterns to synchronize relational databases with real-time analytics engines and downstream Python workers.
- Developed schema-governance practices using Avro and registry patterns to enforce data contracts across interdependent microservices.
- Managed GCP clusters, private data-security protocols, APIGEE proxy layers with API-key authentication, and cloud-to-message-bus integration.
- Implemented Grafana dashboards, Loki, Tempo, SLIs, and SLOs to connect application metrics, logs, traces, and stakeholder business KPIs.
- Maintained critical application availability across two geographic regions with load-balancing strategies, N+2 redundancy planning, and production troubleshooting.
- Migrated on-premise SQL workloads to Amazon Aurora and built AWS Glue ETL pipelines into S3 data lakes using Glue Catalog, Crawlers, partitioning, and PySpark transformations.
- Reduced cloud operating costs through Aurora rightsizing, Glue partition strategies, committed-use discounts, resource-utilization analysis, and monitoring-driven capacity planning.
- Collaborated with development and operations teams to design serverless and microservice solutions using Cloud Run, App Engine, Pub/Sub, and event-driven architecture.

TSYS & Global Payments | Alpharetta, GA

Sr. Java Developer / Web Developer | Feb 2022 - July 2023

- Developed and maintained CI/CD pipelines for AWS-hosted enterprise applications using Terraform, Bash, GitHub branching strategies, release controls, and automated environment provisioning.
- Provisioned multi-team AWS environments rapidly through reusable Terraform modules, scripted infrastructure setup, and standardized deployment processes.
- Designed microservice security using Spring Boot, Spring Security SAML, vulnerability-management practices, and highly available AWS operations.
- Integrated Spring and Hibernate persistence layers and consumed RESTful services through Spring REST clients for secure inter-service communication.
- Implemented AWS monitoring and logging patterns using CloudWatch, DataDog, and NewRelic to support operational response and environment health.
- Managed DevOps support for an enterprise Python web portal in a fast-paced development environment with near-real-time recovery objectives.
- Led development of a React, TypeScript, and Tailwind CSS design system adopted by 12+ internal teams, reducing UI delivery effort by 50%.
- Engineered state-management architecture with Zustand and React Query, eliminating redundant API calls and resolving race conditions in real-time dashboards.
- Implemented micro-frontend architecture with Module Federation to allow independent deployment of product modules within a unified React ecosystem.
- Standardized advanced React patterns including compound components, render props, reusable hooks, and higher-order component approaches.
- Built SSO capabilities using SAML 2.0, OIDC, MFA, adaptive authentication, and centralized identity tools such as Keycloak, Cognito, Okta, Auth0, and Azure AD.
- Supported Google Cloud modernization patterns including GKE, Compute Engine, Cloud SQL, Pub/Sub, Eventarc, Cloud CDN, Cloud Armor, IAM, Shared VPCs, and global load balancing.
- Served as a technical SME for Visa Developer Platform API implementation and supported strategic client-services recommendations.

FedEx | Pittsburgh, PA

Sr. Java Developer | Oct 2020 - Feb 2022

- Led offshore delivery for two enterprise applications, coordinating design, development, code review, testing, production readiness, and release activities.
- Developed and published Spring Boot REST APIs and refactored core microservices to improve maintainability, reduce code complexity, and simplify future enhancements.
- Implemented Docker and Nginx-based deployment patterns to support continuous delivery in high-scalability environments.
- Virtualized server environments for testing and development using Docker container automation and repeatable environment setup.
- Designed MongoDB schemas, complex JSON data models, and SQL stored-procedure optimizations to improve runtime performance and data maintainability.

- Built Kafka producers and consumers with retry, error-handling, and resilience patterns to improve data consistency across distributed environments.
- Designed Redis caching strategies that reduced database load and delivered sub-100ms responses for frequently accessed regional data.
- Conducted load-balancing and performance testing to validate application behavior under high utilization and production-like traffic conditions.
- Deployed new operating applications into GCP and supported migration activities for modernized cloud-hosted services.
- Supported OAuth 2.0 integrations with Authorization Code Flow, PKCE, least-privilege scopes, secure token refresh, and third-party SaaS synchronization.
- Built reusable AngularJS and jQuery UI components and upgraded legacy AngularJS applications to improve frontend stability and maintainability.
- Applied J2EE design patterns including Singleton, Factory, Session Facade, and DAO across service and persistence layers.
- Coordinated UAT, defect triage, regression fixes, and joint system testing activities with business and QA teams.

Tractor Supply Company | Nashville, TN

Sr. Java Developer / Web Developer | Feb 2019 - Aug 2020

- Designed n-tier enterprise applications using Core Java, Spring Boot, Spring ORM, UML, Rational Rose, and established J2EE design patterns.
- Built REST/HTTP and SOAP integrations with API versioning, JSON structures, JMS-based asynchronous workflows, and C++ service clients.
- Managed AWS-hosted web applications, S3 bucket structures, CloudTrail logs, Apache servers, Jenkins builds, and QA/DEV/Production release support.
- Developed AngularJS applications with two-way binding, DOJO widgets, AJAX support, standardized UI directory structures, and Karma unit tests.
- Migrated Java modules to Kotlin for Android development and developed multithreaded C++/STL processes for real-time event notifications.
- Architected Next.js and React solutions using App Router, Server-Side Rendering, Incremental Static Regeneration, React Server Components, Apollo Client, and custom hooks.
- Improved web performance through edge rendering, optimized data fetching, reduced client-side JavaScript, and reusable design-system patterns.
- Implemented Incremental Static Regeneration strategies for high-traffic product experiences while maintaining content freshness.
- Designed middleware patterns for multi-tenant authentication and geo-based routing to reduce redirects and improve request latency.
- Optimized frontend data flows using GraphQL and Apollo Client to reduce redundant API calls and client-side data overhead.
- Monitored and resolved build issues across QA, development, and production environments using Jenkins and release-support practices.
- Established standardized UI code structure to streamline defect correction, code reuse, and maintenance across frontend modules.

Walmart | Bentonville, AR

Software Developer III | Mar 2015 - Sep 2017

- Developed JEE web services using SOAP, WSDL, UDDI, Spring MVC, Hibernate DAO classes, Dispatcher Servlets, controllers, and Spring IOC integration.
- Built TIBCO BusinessWorks interfaces in fault-tolerant and load-balanced modes and configured TIBCO Administrator, TIBCO Hawk, and adapters for SAP, PeopleSoft, and Siebel.
- Created XSD schemas and transformation processes for XML and proprietary data exchange across distributed business workflows.
- Developed AngularJS, Backbone, RequireJS, JSP custom tags, JavaScript, Ruby, and Python utilities for web applications and operational automation.
- Supported MongoDB administration, data modeling, JavaScript DML operations, imports, exports, ad-hoc backups, health monitoring, and cluster support.
- Engineered custom JSP tags and handled multi-threading requirements for complex Java web applications.
- Built and deployed TIBCO processes for data transformation between XML and proprietary formats while supporting fault tolerance and load balancing.
- Automated build processes using Ant and managed version control with SVN in enterprise release environments.
- Partnered with distributed teams to support production troubleshooting, defect resolution, and enhancement delivery for large-scale retail systems.

EDUCATION

Master of Science in Computer Science | GPA: 3.8/4.0 | 2018 - 2019

Southern University and A&M College, USA

Bachelor of Technology | GPA: 3.6/4.0 | 2010 - 2014

Manav Bharti University, India
